

ECOLE THEMATIQUE DE METABOLOMIQUE CLINIQUE

Industry point of view

Clinical metabolomics

Alice Limonciel

October 5th, 2026 Aussois

The role of industry in science

- An anecdote
- Industry is part of the scientific **community**
- Industry **drives innovation** together with other stakeholders
- “Bruker is the company to work with
to translate discovery to bedside diagnostics”

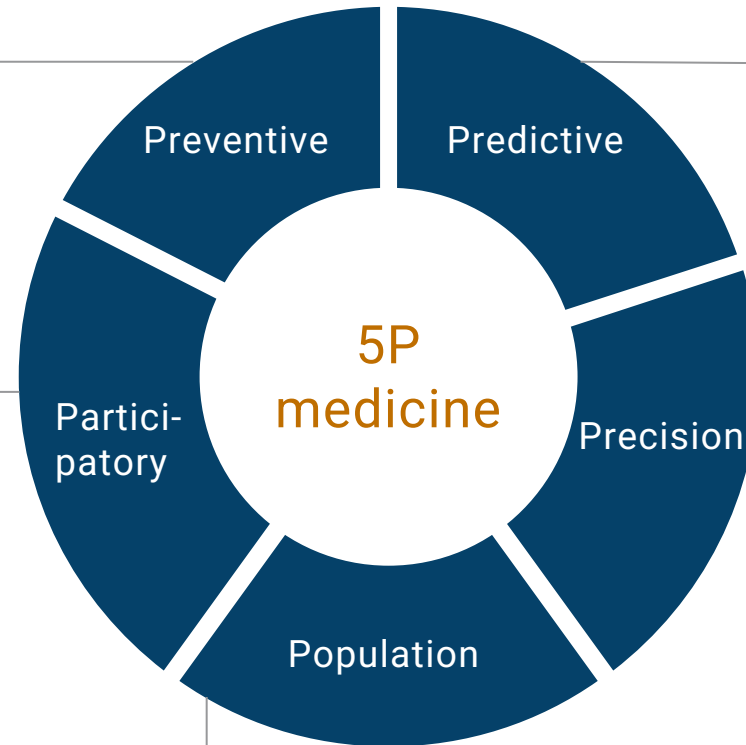

Industry & translation

Focuses on interventions to reduce the likelihood of disease development

Risk scores & Intervention

Engages patients actively in their healthcare decisions and management.

Reference ranges & At-home sampling

Assesses disease risks, progression, and health outcomes based on molecular and clinical data, supporting accurate prognosis and predict drug response.

Biomarkers & Pharmacometabolomics

Adapts medical treatment based on individual genetic, environmental, and lifestyle factors.

Stratification & Metabotypes

Addresses health challenges at the community level by considering public health data, social determinants of health and molecular patterns.

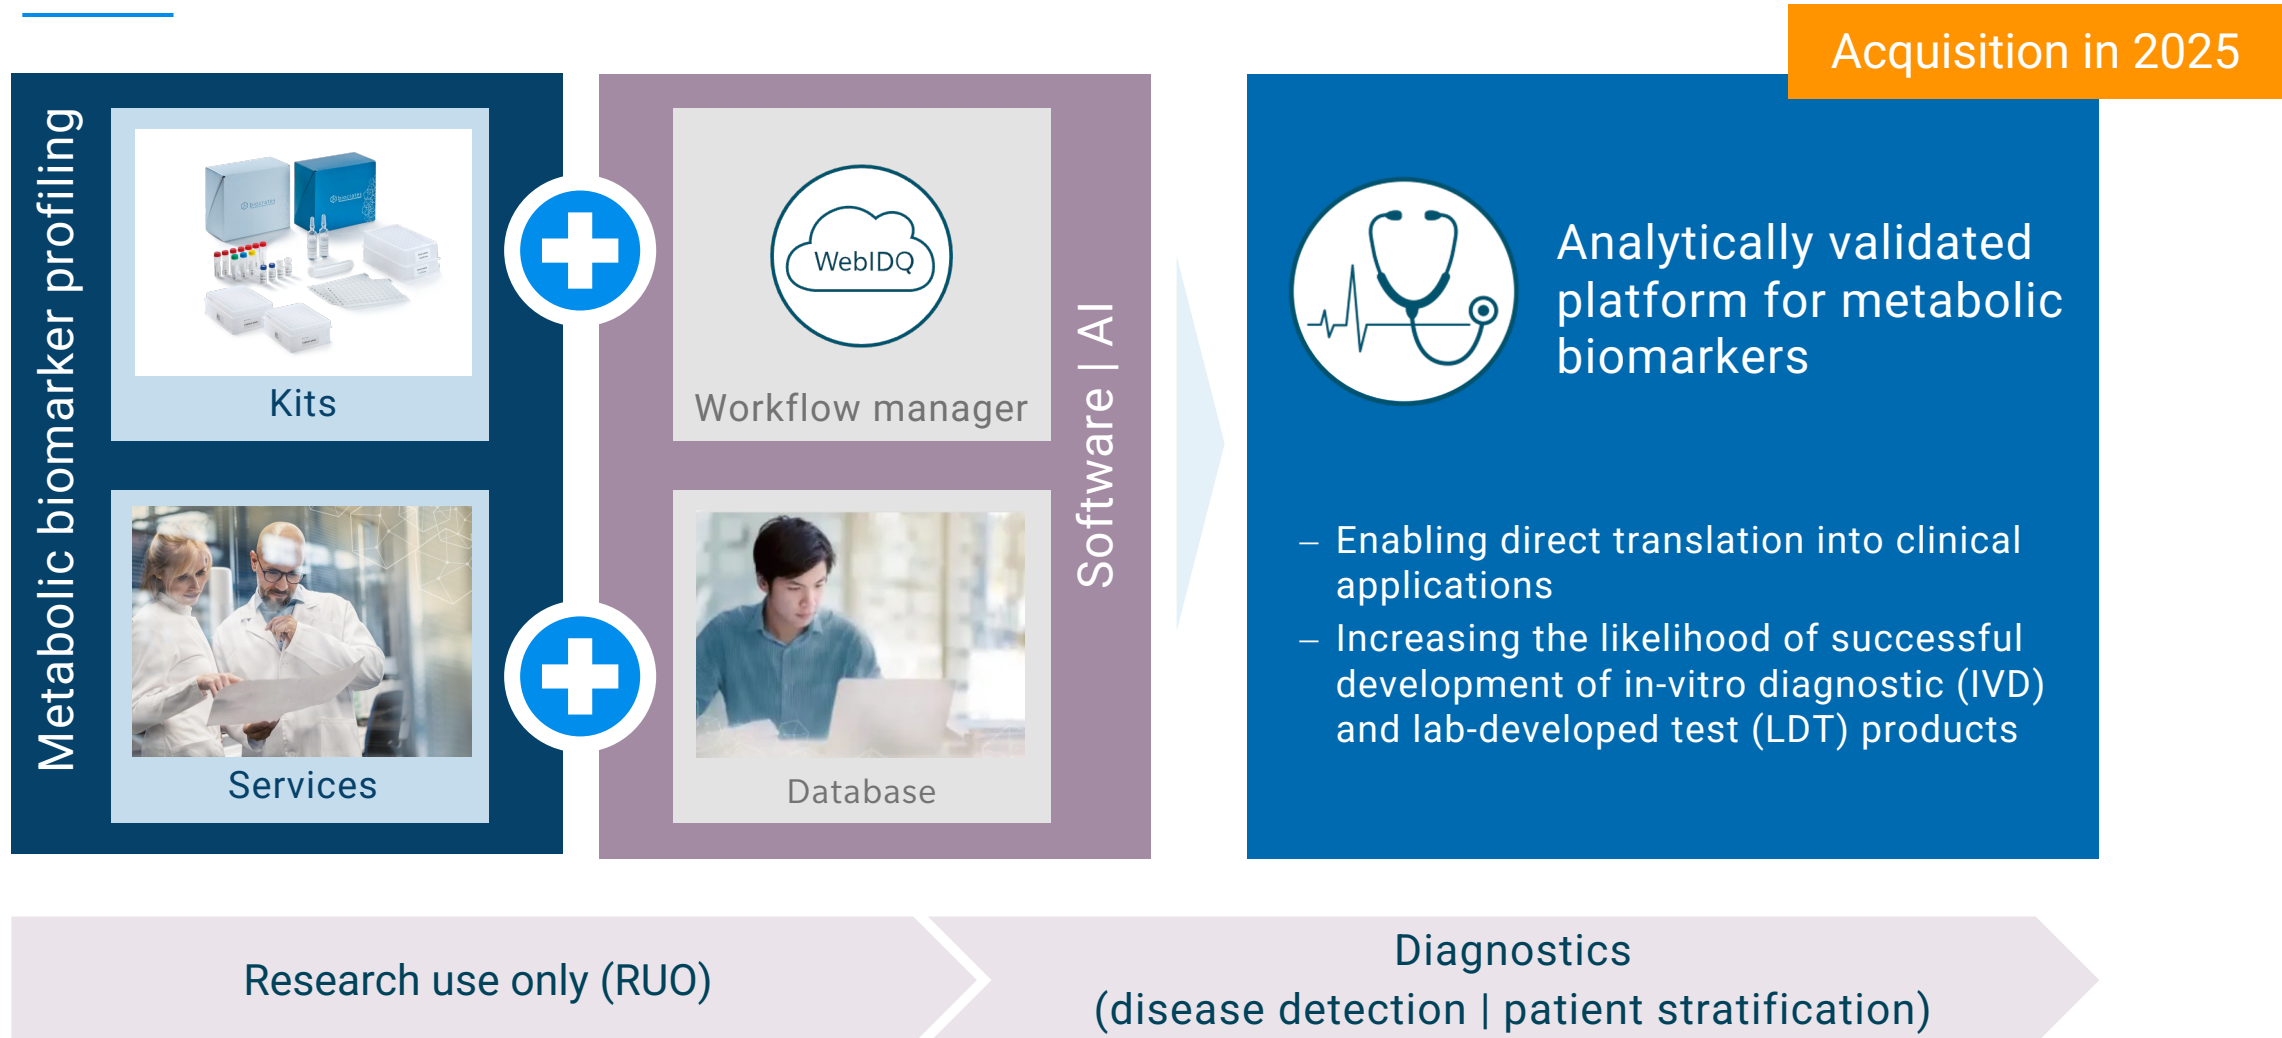

Multimomics

Would you rather...

Buy non-IVD products and build your own diagnostic metabolomics pipeline?

Buy a pre-defined IVD product to measure your metabolomics in the clinics?

Standardization and clinical relevance drives shift to IVD (biocrates view)

Why standardize clinical metabolomics?

- Facilitates translation -> confident discovery
- Minimizes development time
- Facilitates method transfer and scaling

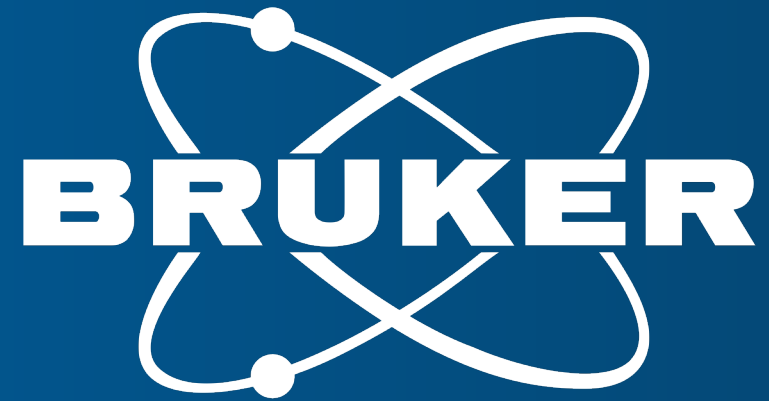

New hybrid MS workflow coming soon. Register here:

Thank you!
